## Tecnologia Made in Italy

IT

Dal 1955 il Gruppo Varvel progetta e realizza riduttori e variatori per applicazioni fisse di piccola e media potenza. Partner affidabile nella produzione e vendita di organi di trasmissione grazie a un elevato livello di servizio, offre anche soluzioni personalizzate operando nel rispetto dei valori dell'impresa socialmente responsabile. Modularità e flessibilità guidano la progettazione dei prodotti Varvel nella realizzazione di kit comuni a tutte le famiglie di riduttori, agevolando così l'attività di distributori e rivenditori che possono configurare in pochi minuti il prodotto richiesto dal singolo cliente.

## Technology Made in Italy

EN

Since 1955 the Varvel Group has been making gearboxes and variators for light industry applications. Reliable partner in power transmission equipment offers also customized solutions always according to a socially responsible company values. Modularity and flexibility lead Varvel products by a unique kit form, common to all gearbox series. This feature allows distributors an easier job to set up required products in few minutes.

## Technologie Made in Italy

DE

Seit 1955 plant und stellt die Varvel-Gruppe Getriebe und Verstellgetriebe für feste Kleinleistungsanwendungen her. Dank dem hohen Dienstniveau ist Varvel ein zuverlässiger Partner für Herstellung und Verkauf von Getriebewerkteilen und bietet maßgeschneiderte Lösungen an, in Verbindung mit sozialverträglicher Handlungsweise. Modularität und Flexibilität sind Kennzeichen für Varvel-Produkte. Die Firma produziert Teile, die sich für alle Getriebetypen eignen. Verteiler und Verkäufer können somit den Kundenanforderungen gerecht werden.

# ISM & BSM - Moduli - Modules - Module

## Descrizione - Description - Beschreibung

I moduli entrata ISM con albero sporgente e BSM anti-ritorno sono installabili sulla maggior parte dei riduttori VARVEL in versione entrata senza flangia «S» e giunto elastico «G» in pochi minuti con un semplice cacciavite.

### ISM - Modulo albero entrata

L'albero di entrata è supportato da due cuscinetti a sfere schermati del tipo 2RS e pertanto non necessita di alcuna lubrificazione. E' fornito in uscita del semi-giunto per accoppiamento ai riduttori VARVEL corrispondenti.

### BSM - Modulo antiretro

Costruito in due versioni, albero sporgente con cuscinetto a sfere e cuscinetto anti-ritorno e flangia IEC o NEMA con solo anti-ritorno, permette il montaggio ai riduttori Varvel in versione entrata con giunto elastico «G».

Le informazioni sulla disponibilità delle flange motore, potenze, coppie e rapporti di riduzione del riduttore al quale i moduli ISM e BSM sono applicati, vengono evidenziate dai relativi cataloghi RS-RT, RD e RN-RO-RV.

I carichi radiali dei moduli ISM sono i carichi esterni d'entrata come riportati a pag. 20 del catalogo RS-RT.

The input modules ISM with solid shaft and BSM with back-stop can be easily fitted on the majority of VARVEL gearboxes, no-flange input version «S», and flexible coupling «G» in few minutes and with a simple screwdriver help only.

### ISM - Input shaft module

The input shaft is supported by two sealed grease-packed ball bearings type 2RS and therefore, does not need any lubrication for life. A half-coupling is provided for direct coupling to corresponding VARVEL gearboxes.

### BSM - Back-stop module

Manufactured in two versions, solid shaft input with ball bearing and back-stop bearing and IEC or NEMA flange, allows the mounting to any Varvel gearboxes with flexible coupling «G» input.

Information on availability of motor flanges, powers, torques and reduction ratios of the gearbox to which the modules ISM and BSM are fitted to, are shown in relevant catalogues RS-RT, RD and RN-RO-RV.

Input loads of ISM modules are the external input loads that are shown on page 20 of the catalogue RS-RT.

Die Module mit freier Eingangswelle ISM und Rücklaufsperr BSM können problemlos mit den meisten VARVEL Getrieben ohne Eingangsflansch Version «S» und Kupplung «G» in wenigen Minuten und mit einem Schraubenzieher montiert werden.

### ISM - Modul freie Eingangswelle

Die Eingangswelle wird durch zwei geschlossene und gefettete Kugellager vom Typ 2RS gelagert und sind auf Lebensdauer geschmiert. Für die direkte Montage an das entsprechenden Varvel Getriebe ist eine Halb-Kupplung vorgesehen.

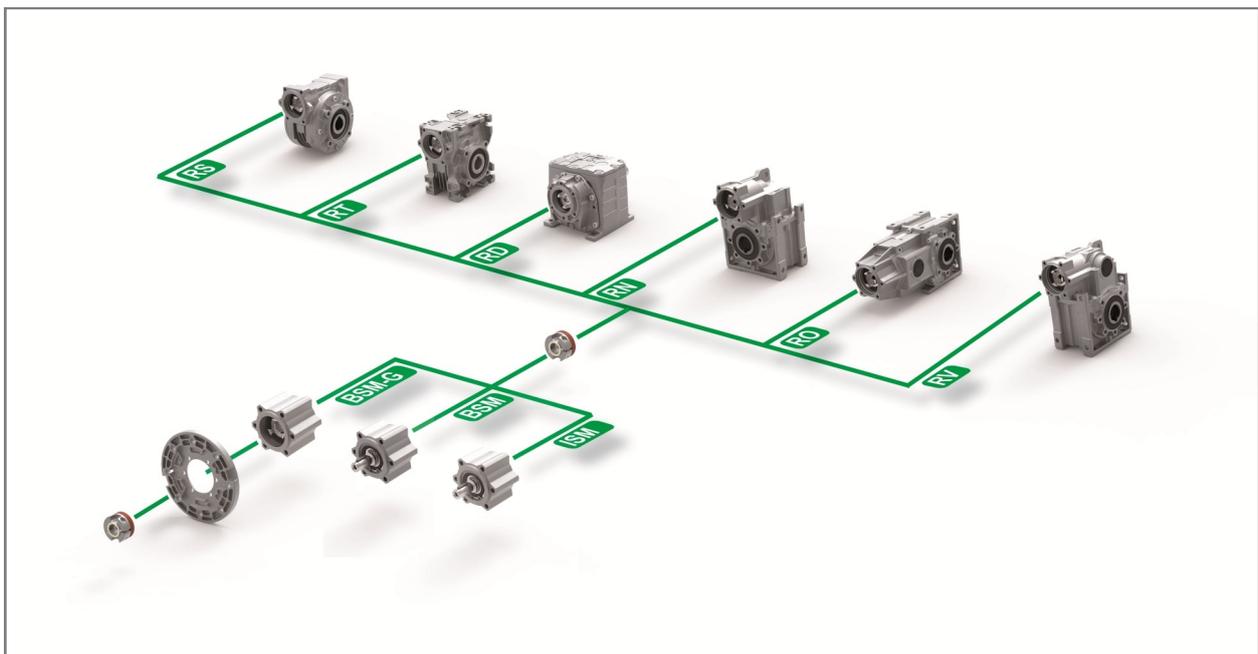

### BSM - Modul Rücklaufsperr

In zwei Versionen hergestellt, Eingangswelle mit Kugellager und Rücklaufsperr, mit IEC- oder NEMA-Flansch, ermöglicht die Montage an jedes Varvel-Getriebe mit Ausgleichkupplung «G».

Informationen über die Verfügbarkeit von Motorflanschen, Leistungen, Drehmomente und Untersetzung der Getriebe, an welche die Module ISM und BSM montiert werden, werden in den entsprechenden Katalogen RS-RT, RD und RN-RO-RV beschrieben.

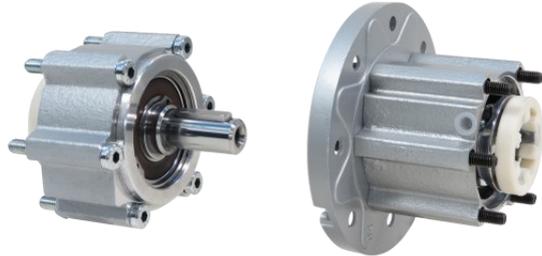

Die Eingangskräfte beim Modul ISM werden im Katalog RS-RT (Seite 20) dargestellt.

B - Static load  
C - Resistant torque (idle)

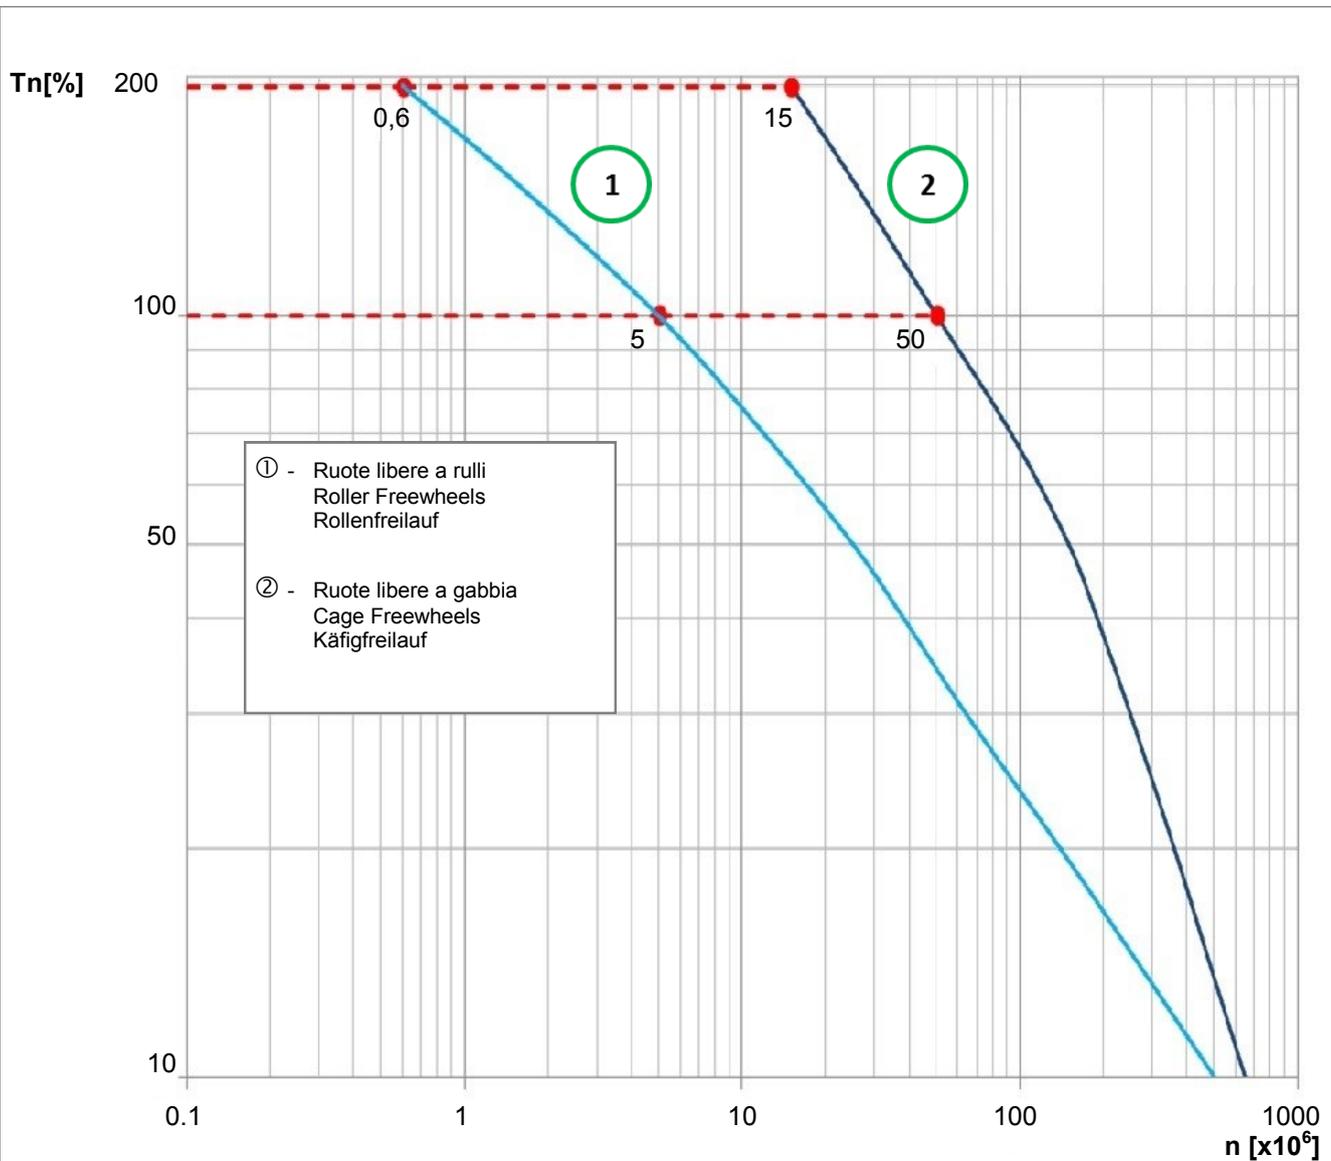

Max. torque = 2 x nominal torque

A - Dynamisch Belastung  
B - Statisch Belastung  
C - Schleppmoment (Los)

Max. Drehmoment = 2 x Nenndrehmoment

## Module - Modules - Moduli - ISM & BSM

Freilaufdauer - Freewheel Lifetime - Durata Ruote libere

Die Module BSM und BSM-G sind nur mit dem Typ ② Freilaufkäfig ausgestattet.

Die Kurve stellt die Freilaufdauer gemäß der Belastung und der Anzahl der möglichen Betätigungen dar.

Unter Betätigung versteht man die Sperrwirkung der Radrückwirkung in Bezug auf die Losbewegung.

Mit zunehmender Belastung  $T_n$  [%] reduziert sich die Anzahl der möglichen Aktivierungen  $n$  [ $\times 10^6$ ] und somit die Betriebsstundenzahl.

BSM and BSM-G modules are fitted with cage freewheels of the type ② only .

The curve shows the lifetime of the freewheels according to the application load and possible starting-up number.

Starting up is meant as the locking action of force feedback of the wheel as regards to idle motion direction.

Bigger the load  $T_n$  [%] lower the possible starting-up  $n$  [ $\times 10^6$ ] and working hours.

I moduli BSM e BSM-G utilizzano solamente ruote libere a gabbia del tipo ②.

La curva rappresenta la durata delle ruote libere impiegate in base al carico applicato e al numero di attivazioni possibili.

Per attivazione si intende l'azione di bloccaggio della retroattività della ruota rispetto al senso di movimento folle.

All'aumentare del carico  $T_n$  [%] si riduce il numero di attivazioni possibili  $n$  [ $\times 10^6$ ] e di conseguenza il numero di ore.
